		2021	2022	
thiophanate-methyl	Earthworms (castings).	3	3.000	Used mostly for earthworms on greens.. (Renovo)

**ANNUAL REPORT - UNLISTED PESTICIDE USE
for the year 2022**

Golf Course: Kapuskasing Golf Club

Please upload map(s) of the golf course showing the locations where unlisted pesticides were applied, and identify use by unlisted pesticide ingredient or by product type (fungicide, insecticide, herbicide, growth regulator)

Please explain how practicing integrated pest management (IPM) and maintaining IPM accreditation with the IPM Council of Canada minimized the use of pesticides on your golf course and how it will minimize use in this current calendar year.

Kap Golf Club had a very wet spring and more summer rainfall than usual in 2022. This contributed to a larger than usual spring outbreak of dandelions, causing an increase in use of Trillion to eliminate those weeds and maximize member satisfaction. We always strive on bettering our cultural practices to lower the use of chemicals. This year, hardly any irrigation was needed due to higher-than-normal rainfall for the season. This is the second year we have used Instrata for snow mold protection, and it worked very well in 2021. We strongly believe in IPM practices and will continue to apply practices such as spot treatments (ie silver moss) proper mowing and fertilization to control weeds and pests and reduce chemical use.

We, the undersigned, attest that the above information is accurate and inclusive of all pesticide products applied on our golf course for the entire year. We are aware that it is an offence under the Pesticides Act: 17(6) to include false or misleading information in any document or data required to be created, stored or submitted under the Act.
