

## ANNUAL REPORT - UNLISTED PESTICIDE USE for the year 2024

**Golf Course:** Kapuskasing Golf Club

**Please upload map(s) of the golf course showing the locations where unlisted pesticides were applied, and identify use by unlisted pesticide ingredient or by product type (fungicide, insecticide, herbicide, growth regulator)**

Please explain how practicing integrated pest management (IPM) and maintaining IPM accreditation with the IPM Council of Canada minimized the use of pesticides on your golf course and how it will minimize use in this current calendar year.

Kap Golf Club had a great summer, with increased membership and good playing conditions. We had the usual dandelion infestation, but other than dollar spots and cutworms, no major pests infected our turf. We strive to continue using cultural practices such as mowing, fertilization and irrigation to mitigate pests. We use fall applications to limit pink and grey snow mold to preserve playing surfaces for the next season. We strongly believe in IPM accreditation and strive to limit chemical usage by using spot treatments and minimizing irrigation when possible. We continue to aerate, fertilise and Verti cut our greens multiple times during the golf season.

*We, the undersigned, attest that the above information is accurate and inclusive of all pesticide products applied on our golf course for the entire year. We are aware that it is an offence under the Pesticides Act: 17(6) to include false or misleading information in any document or data required to be created, stored or submitted under the Act.*
